

Course Content as External Links

Course content sometimes takes the form of links to external web sites. The Internet provides many resources that would not otherwise be available to you.

Instructors can post links to web sites anywhere on your coursesite. The student would click on the title of the web site to open the link.

Alternately, instructors can compile a whole list of web sites on a page titled External Links. Students would access this page by clicking a button in the navigation bar. An example of an External Links page is shown below:

Click on the Title of the web site to open the link.
