

Drones for the Hobbyist

Saturday, April 13, 2019 ♦ 9 a.m. - 12 p.m.

Unmanned aircraft systems commonly known as drones are becoming a popular pastime for many individuals. Unknown to those individuals, what is very likely not included in the drone packaging are the guidelines and applicable laws that the operator is responsible for complying with.

Oakland Community College is pleased to offer an Official FAA Safety Team Wings workshop about Drones and Model Aircraft Operations that will provide emphasis in the following areas: FAA Authority and Regulations, registration requirements, safety concerns and being compliant with the laws and guidelines, frequently asked questions to aid in ensuring a basic knowledge of regulations and other requirements, and hands-on flying time to help you reinforce required knowledge areas, safety concerns, and best operating practices.

Intended audience: Aviators, enthusiasts, drone only operators (of any age), or just if you are curious!

Non pilots will receive a Course Completion Certificate and pilots will receive Wings Program Credit and a Course Completion Certificate.

Registration Code: PRSN-1081-T0301

Fee: \$12
